

Table of Contents

Abstract	i
Acknowledgements	ii
Table of Contents	iv
Index of Technical Terms	9
1. Introduction.....	1
2. Neutrino Physics in Perspective	5
2.1 Neutrinos in the Standard model.....	5
2.2 Neutrino Mass.....	6
2.3 Neutrino Mixing in Vacuum.....	8
2.3.1 Two-Generation Mixing	9
2.3.2 Three-Generation Mixing: One Mass Scale Dominance	10
2.3.3 Three-Generation OMSD Maximal Mixing	11
2.3.4 Implications of Neutrino Mixing.....	11
2.4 Solar Neutrinos	12
2.4.1 The Solar Standard Models.....	12
2.4.2 Experimental Results on Solar Neutrinos	14
• Kamiokande.....	14
• Super-Kamiokande.....	14
• Homestake	15
• GALLEX	16
• SAGE.....	16
2.4.3 Summary of Solar Neutrino Results.....	17
2.5 Atmospheric Neutrinos.....	19
2.5.1 Atmospheric Neutrino Physics	19
2.5.2 The Atmospheric Neutrino Flavour Ratio	21

2.5.3	Sensitivity of Atmospheric Neutrino Experiments to Neutrino Vacuum Oscillations.....	22
2.5.4	Experimental Results on Atmospheric Neutrinos.....	24
	• Kamiokande.....	27
	• Super-Kamiokande.....	28
	• IMB.....	29
	• Fréjus.....	30
	• NUSEX.....	31
2.5.5	Summary of Atmospheric Neutrino Results.....	31
2.6	Terrestrial Neutrino Experiments.....	33
2.6.1	The LSND Neutrino Oscillation Signal.....	33
2.6.2	The KARMEN Experiment.....	34
2.6.3	The CHOOZ Experiment.....	34
2.6.4	High Energy Neutrino Beams: CHORUS and NOMAD.....	35
2.7	Neutrino Mixing Interpretation of the Data.....	36
2.7.1	Two-Generation Mixing Fits.....	36
2.7.2	Three-Generation Maximal Mixing: A Global Fit to the Data.....	36
3.	The Soudan 2 Experiment.....	39
3.1	The Soudan 2 Detector.....	39
3.1.1	The Main Detector Module.....	41
3.1.2	The Main Detector Electronics and the Trigger.....	43
3.1.3	The Active <i>Veto</i> Shield.....	45
3.1.4	Detector Survey: The Soudan 2 Database.....	48
3.2	The Analysis Chain.....	49
3.2.1	SOAP.....	49
3.2.2	The Scan Analysis.....	50
3.2.3	The Automated Analysis.....	51
3.3	Elements of Software Event Reconstruction.....	52
3.3.1	The Event Box.....	52
3.3.2	Clustered 2D Pulses.....	53
3.3.3	T_0 and the T_0 Window.....	53
3.3.4	The Event Axis.....	56
3.4	Soudan 2 Events.....	57
4.	MC Simulation of the Soudan 2 Experiment.....	62
4.1	The Event Generator.....	62
4.2	The Detector Simulation.....	64

4.2.1	Detector Configuration and Noise as a Function of Time.....	65
4.3	MC Samples for any General Neutrino Mixing Scenario	66
5.	Event Selection.....	69
5.1	Event Samples: Definitions.....	71
	• The GOLD Event Sample	71
	• The BGD Event Sample	71
	• RINSE Development Event Samples	73
5.2	Survey of Cuts.....	73
5.2.1	Containment Cuts.....	73
	• Error Cuts.....	73
	• Fiducial Volume Cuts	73
	• Crack Cuts.....	74
	• Data Quality Cuts	74
	• The Check-Scan.....	74
5.2.2	The Shield Cuts	74
5.3	Analysis and Determination of each cut.....	75
5.3.1	The Error Cuts	75
	• Cut0; Event Processed Successfully.....	76
	• CutE1; Physical T_0	76
	• CutE2; Removal of Random Triggers.....	77
5.3.2	The Fiducial Volume Cut.....	77
	• CutFV; Fiducial Volume Cut.....	78
5.3.3	The Crack Cuts	79
	• CrX; Anode Crack Cut.....	80
	• CrZ; Wireplane Crack Cut.....	82
	• CrY; Cathode Crack Cut.....	84
5.3.4	The Data Quality Cuts.....	84
	• CutQ4; Badly Reconstructed Events.....	84
	• CutQ5; Vertical Cosmic-Ray Muons	86
	• CutQ6; Crack Splats.....	87
	• CutTopA; CR-muons Coming Down Parallel to Anode Wires	89
	• CutTopT; Events with Blob not Identified by BLOBER.....	91
	• CutBreak; Class of Breakdown Events	93
	• CutSnake; Snake Cut.....	94
	• CutZen; Zen Cut.....	96
	• CutHit; Number of Hits (Energy) Cut.....	97
	• CutRun; Faulty Runs Cut.....	100
5.3.5	Summary of Automated RINSE Containment Cuts	100
5.3.6	The Check-Scan	102
5.3.7	The Shield Cuts	103

•	CutSh2: Shield Multiplicity of 2 and Above.....	105
•	CutSh1: Unit Shield Multiplicity	107
5.4	Acceptance of Event Selection.....	109
5.5	Comparison to the GOLD Scanned Sample	112
5.6	Background Contamination.....	113
5.6.1	Choice of Background Sample	113
5.6.2	Depth and Hit Distributions of DATA and MCNO.....	116
5.6.3	A Background Calculation: Fitting to GOLD	117
5.6.4	Effect of Depth and Hit Cuts on Background sample	122
6.	Neutrino Flavour and Phase Estimators	123
6.1	Flavour estimators.....	123
6.1.1	Cumulative Flavour Distributions	123
6.1.2	Moments of Inertia: Γ	124
6.1.3	Vectors joining neighbouring hits: Λ_{46}	130
•	Power Spectrum of Distribution on a Sphere.....	130
•	Definition of Neighbouring Hits	133
•	Choice of Λ Flavour Estimator	134
6.1.4	Further Discussion on Λ_{46}	137
6.2	Definition of Energy Dependent Flavour Cut	143
6.3	Neutrino Energy (E_ν) Estimator	144
6.4	Angular Resolution of Neutrino Direction and Distance (L) Estimator	148
6.5	L/E_ν estimator.....	152
6.6	Conclusions	155
7.	Data Analysis and Results.....	156
7.1	Atmospheric Neutrino Anomaly Revisited	156
7.1.1	Background Fits for Each Flavour Separately	160
7.1.2	The Ratio of Ratios.....	163
7.1.3	Discussion on R: the Background Hypothesis	164
7.1.4	Further Investigation of the Anomaly.....	167
•	Run Number Distributions	167
•	Λ_{46} Distributions	168
•	Γ Distributions	169
•	Zenith Angle and L/E_ν Distributions	170
•	Zenith Angle Distributions after a Low Energy Cut.....	171
7.2	A Multi-Variable Fit	175

7.2.1	Data Compared to No Oscillations Model.....	176
7.3	Neutrino Mixing Searches.....	178
7.3.1	Oscillations Mode: $\nu_{\mu} \leftrightarrow \nu_{\tau}$	178
7.3.2	Oscillations Mode: $\nu_{\mu} \leftrightarrow \nu_e$	182
7.3.3	Three Generation Maximal Mixing.....	185
7.4	Conclusions.....	188
Appendix A The Soudan 2 Collaboration		190
Appendix B A Log-Likelihood Multi-Variable Fit		191
B.1	Mechanism of log-likelihood fit	191
B.2	Determination of mixing parameters	193
B.3	Determination of the Quality of Fit.....	193
B.3.1	A χ^2 -test.....	193
B.3.2	The Likelihood of the log-Likelihood	194
B.3.3	Generation of Pseudo-Simulated Experiments	195
Bibliography		196
