

## Index of Technical Terms

The following index contains a selection of technical terms concerning the Soudan 2 experiment and analysis presented in this thesis.

---

|                                    |                           |
|------------------------------------|---------------------------|
| anode wires, 42                    | half-wall, 41             |
| bandolier, 42                      | hit time, 44              |
| blob, 43                           | loom                      |
| cathode boards, 42                 | logical, 44               |
| crack splat, 87                    | physical, 41, 43          |
| cross-talk in cathodes, 43         | neutrino scattering modes |
| depth estimator, 78                | inelastic, 64             |
| detector time unit, 44             | neutral current, 64       |
| Dmin. <i>See</i> depth estimator   | quasi-elastic, 64         |
| dtu. <i>See</i> detector time unit | shield                    |
| event axis, 56                     | adjacency, 47             |
| event box, 52                      | multiplicity, 105         |
| event samples                      | overlap, 47               |
| bgd, 71                            | snake, 94                 |
| gold, 71                           | T <sub>0</sub> , 53       |
| mcaf, 67                           | T <sub>0</sub> Window, 53 |
| mcno, 68                           | wall, 40                  |
| rinse development, 73              | wireplane, 42             |
| fiducial volume, 78                | zen, 96                   |
